EDITORIAL

It is a great pleasure to present this volume 01 issue 01 of the Pioneer Journal of Dental Research & Health Science, an academic platform dedicated to promoting scientific inquiry, research, and the advancement of healthcare knowledge.

Research is an integral component of quality dental education. Beyond clinical competence, dental professionals must develop critical thinking, scientific curiosity, and the ability to apply evidence-based knowledge in patient care. A strong research culture enables educators, clinicians, and students to explore new ideas, address emerging challenges, and contribute meaningfully to the advancement of oral healthcare.

In Bangladesh, oral diseases remain an important public health concern, affecting individuals' general health, quality of life, and social well-being. Addressing these challenges requires continued research, preventive strategies, and collaboration among dental professionals, researchers, and public health practitioners. Academic journals play a vital role in disseminating scientific findings and translating research into practical healthcare solutions.

The Pioneer Journal of Research and Health Science aims to provide a platform for original research, reviews, case reports, and scholarly discussions that uphold scientific integrity and ethical standards. We encourage faculty members, students, and researchers to contribute to the development of knowledge through rigorous investigation and responsible publication.

I express my sincere appreciation to the editorial board, reviewers, authors, and all contributors whose dedication has made this publication possible. I hope this journal inspires young researchers, strengthens academic collaboration, and contributes to the continuous improvement of dental education and healthcare in Bangladesh.
