EDITORIAL

It is a privilege to present this volume 01 issue 02 of the Pioneer Journal of Dental Research & Health Science, reaffirming our commitment to scientific research, academic excellence, and the advancement of evidence-based healthcare.

Modern dentistry continues to evolve through innovations in diagnostic techniques, restorative materials, digital technologies, and preventive care. However, the effective application of these developments depends on reliable scientific evidence, clinical expertise, and consideration of patients' needs and preferences. Evidence-based dentistry enables practitioners to make informed decisions, improve treatment outcomes, and maintain high standards of patient care.

In Bangladesh, further research is needed in areas such as oral epidemiology, preventive dentistry, periodontal health, oral cancer awareness, and access to dental services. Studies addressing local health needs can help identify barriers to care and guide the development of effective, affordable, and culturally appropriate interventions.

Equally important is the ethical conduct of research. Scientific integrity, appropriate ethical approval, informed consent, confidentiality, and transparent reporting must remain fundamental principles of academic publication. These standards strengthen public trust and ensure that research contributes responsibly to healthcare development.

As an academic institution, Pioneer Dental College remains committed to encouraging research, critical thinking, and collaboration among faculty members and students. I sincerely thank the editorial board, reviewers, authors, and contributors for their valuable efforts in bringing this volume to publication.

May this journal encourage continued scientific exploration and inspire dental professionals to integrate research evidence with clinical expertise and compassionate patient care.

Prof. Dr. Rakiba Sultana
